

A FEW WAYS FORWARD

Keep MarketPollen humming.

Following our conversation -- a simple look at a few options.

What's already in place

MarketPollen is the custom platform your team uses for contacts, cake donations and reachouts, opportunity discovery, day routing, quarterly mouths tracking, per-store users, and AI help with notes, follow-ups, and outreach drafts. One place instead of a stack of separate tools.

Options

A few paths we talked about. You can mix pieces, or we can shape something that fits better -- this is a starting point.

1 Monthly managed service

\$95 per store / month

Covers hosting, support, security, unlimited AI & mapping, and keeping the app running. New store onboarding included. Month-to-month; cancel anytime.

2 Work put in so far

15 hours x \$150 / hour = \$2,250

A straightforward estimate of the time already invested building and running MarketPollen.

3 Equity in MarketPollen

Buy-in and ownership share -- let's define together

If you'd like to own a piece of the company behind the product, we can put together a fair buy-in and ownership split.

A note

These aren't take-it-or-leave-it packages. If one path, a blend, or something different makes more sense after we talk, we can write that up cleanly.
